Charts Report

Average Score by Assessment

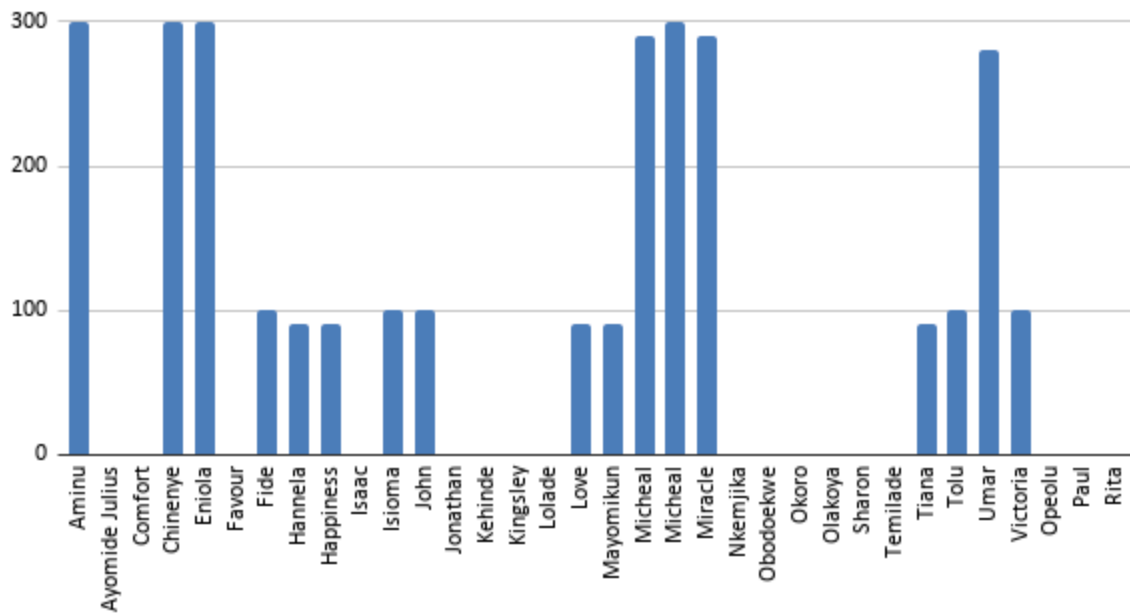

The bar chart compares the average score across all assessments. The Classroom Discussion Board recorded the highest average score, while the Capstone Assessment and Personal Time Management Improvement Plan had the lowest average scores. This suggests that learners performed better in classroom discussions than in some of the other assessments.

Performance Categories

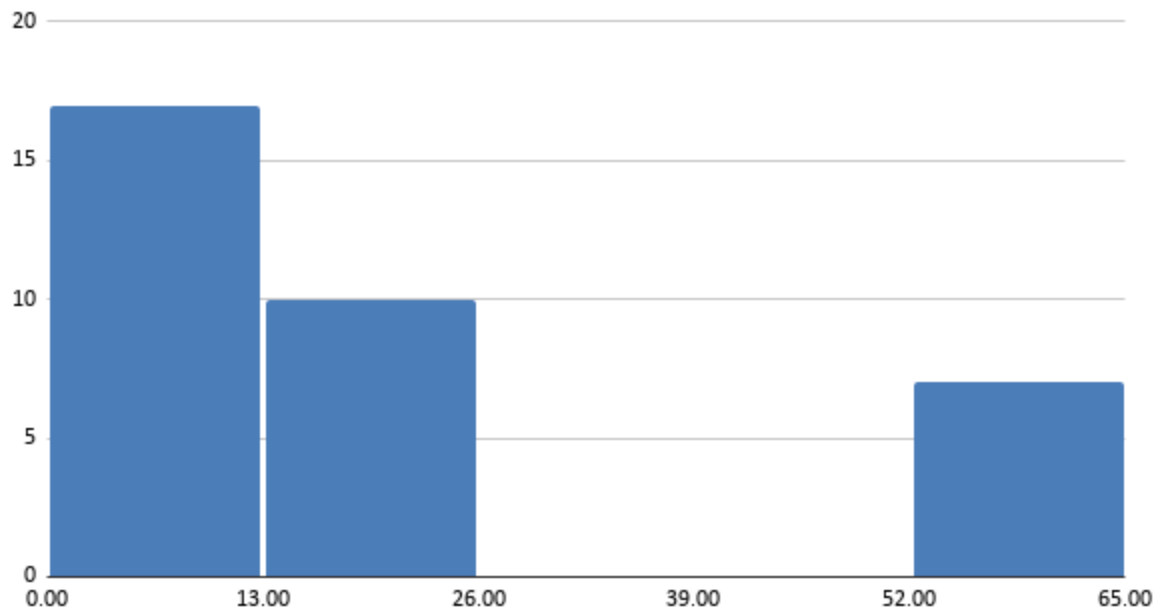

The pie chart shows the distribution of learners based on their overall performance. Most learners fell into the Needs Improvement category, while only a few achieved Good or Fair performance. No learner reached the Excellent category.

Total Score by Learner

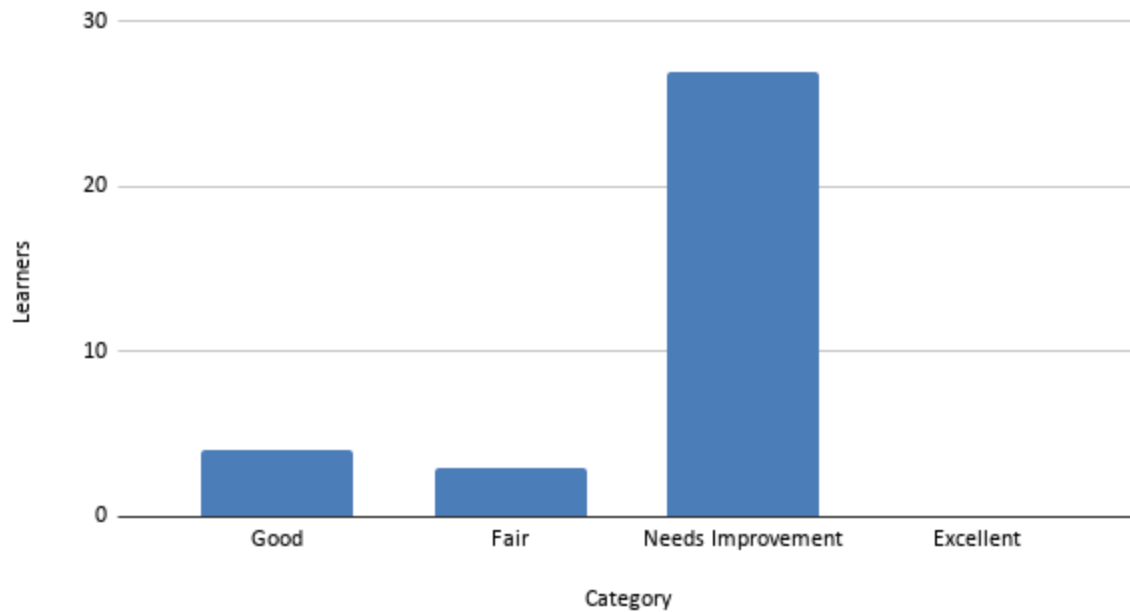

The column chart compares the total scores of individual learners. It highlights the variation in learner performance, showing that some learners scored significantly higher than others. This chart makes it easy to identify the highest- and lowest-performing learners.

Average Scores

The histogram illustrates how learners' average scores are distributed. Most learners scored within the lower score ranges, indicating that overall performance was relatively low across the cohort. Very few learners achieved higher average scores.

Performance Distribution

The performance distribution chart provides a clear comparison of the number of learners in each performance category. The chart confirms that Needs Improvement was the largest category, while Excellent had no learners. This highlights the need for additional support and improved learner engagement in future cohorts.
